

With slip/fall concerns...
...the tread makes the difference.

METRO TREAD®
unglazed ceramic quarry tile

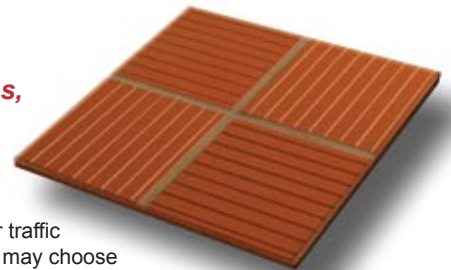

9 RAISED TREADS PER TILE

Coefficient of Friction
.90 dry and .70 wet

METRO TREAD® is designed for tough applications like those associated with heavy traffic, nasty spills, excessive moisture, and extreme temperatures. Use METRO TREAD® anywhere a durable flooring with added slip resisting properties is required. METRO TREAD® is available in three through-the-body natural earth tones in the 6" x 6" size.

For most applications,

METRO TREAD must be installed in a grid pattern (alternating tread direction) as shown at right. For areas with a linear traffic pattern such as a ramp you may choose to lay the tile so the traffic flows across the tread.

**Because
compromise
is not an
option!**

Nine reasons METRO TREAD® is the tile of choice for tough areas.

1. Nine treads for added slip resistance.

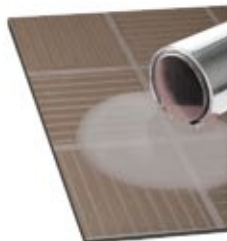

Nine treads combined with the extruded unglazed surface and 6" x 6" size, make METRO TREAD perfect for tough areas like commercial kitchens.

Coefficient of friction .90 dry and .70 wet.

2. Resists spills and staining.

METRO TREAD is hard fired in kilns at over 2,000° F for very low absorption (less than 3% qualifies as vitreous). This makes METRO TREAD stain and soil resisting to most common food and chemical spills.

3. Ready for extreme temperatures.

Since METRO TREAD is low absorption and unglazed it is ready to go to work from the cooler to the oven area - even outdoors. METRO TREAD will not melt or bubble under extreme conditions.

4. Relieved edges resist chipping.

METRO TREAD is designed with a relieved edge (formed as the tile is extruded) and manufactured to strict tolerances. The edges are left intact - never ground. The tight die skin and relieved edges resist chipping from day to day use.

5. Ultimate durability- 1/2" thick.

METRO TREAD has a full 1/2" thick body for added durability. The thickness of the tile helps METRO TREAD resist impact and abrasions.

6. Economical- best value.

Over the life of the installation METRO TREAD is proven to be the most cost effective flooring option. METRO TREAD is both low maintenance and an extremely tough tile, a great combination when counting costs.

7. Requires simple maintenance.

A neutral cleaner like Spic and Span®, a clean mop, and warm water are all that is required to maintain a METRO TREAD floor. No special mops or chemicals are needed*.

*See our complete maintenance information on our website - metroceramics.com

8. Tangible green attributes.

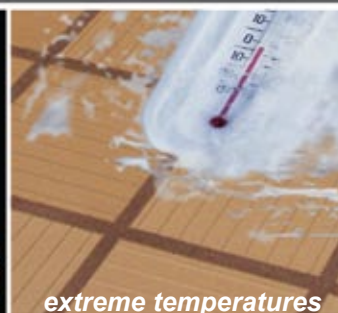

METRO TREAD has a number of green attributes.

- Central Location
- No V.O.C.'s
- Will not promote mold or bacteria growth
- Can be installed and cleaned using green methods.
- Long life span and can be re-purposed as road bed material.
- Abundant natural material.

9. Color will never wear off.

METRO TREAD is available in three through-the-body colors. There is no glaze to wear off and no traffic wear patterns to contend with. The color you specify is the color you'll have for the life of the installation.
